

carevix™
Suction Cervical Stabilizer

What do you need to know about reducing pain through IUD placement with Carevix™?

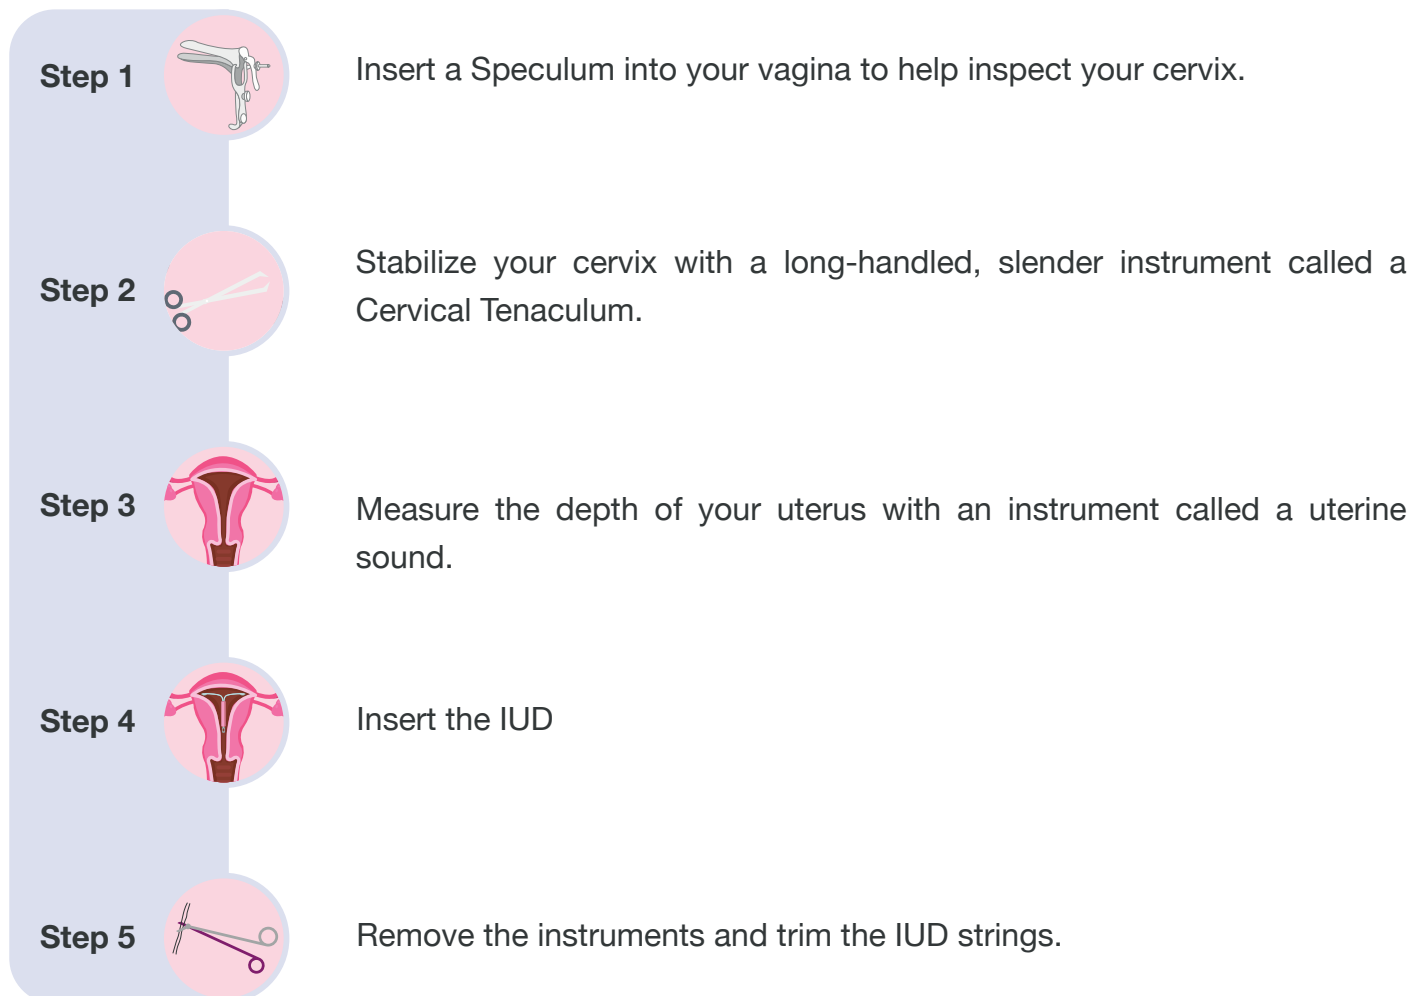

30% to 73% pain reduction
during IUD placement

IUD = Intrauterine Device

 **aspivix**

What to Expect During the IUD Insertion?

An IUD placement in the uterus is a non-surgical procedure by your healthcare provider during an in-office visit or immediately after giving birth.

DID YOU KNOW?

Cervical Tenaculum is used by providers to stabilize the cervix by holding the cervix tissue.

Common side effects experienced by women are pain, bleeding or dizziness during or after placement.

A source of pain during the procedure is attributed to the Cervical Tenaculum (**step 2**).

What is the Tenaculum and how Carevix™ might help?

- The Cervical Tenaculum is a surgical instrument commonly used in gynecology to stabilize the cervix and hold the uterus in position.
- It resembles a pair of scissors and while highly effective, it often causes pain and bleeding.
- Carevix™ is a modern alternative to the Tenaculum. It has been designed to reduce pain and bleeding in transcervical procedure such as an IUD.
- It leverages vacuum technology to grasp the cervix delivering a gentle yet strong traction.

During the Intrauterine Device (IUD) procedure your healthcare provider might:

DID YOU KNOW?

Solutions, such as Carevix™ exists that can reduce pain between **30% and 73%**

Clinical Evidence Supporting Carevix™

- During a clinical study, 100 patients were involved to measure pain experienced during IUD procedures.
- The study was a head to head comparison between using Carevix™ and the Tenaculum.
- This study took place at two leading University Hospitals in Switzerland.
- The results showed significant pain and bleeding reduction by using Carevix™.

Pain Reduction with Carevix™

- All Women

Pain Reduction with Cervix Traction

52% less

Pain Reduction with IUD Insertion
